COVID-19

14 DAY INCUBATION PERIOD

DAY 1

David has been exposed to COVID-19.

DAY 3

In preparation for his trip, David is tested for COVID-19. The result is negative, David is reassured, but David is infected.

DAY 5

David travels to Nunavik for work.

DAY 6

David is invited to a dinner with colleagues. Without knowing it, he exposed them to the virus during his period of contagiousness. His symptoms will not appear until 48 hours later.

DAY 8

David develops symptoms of COVID-19, coughing and feeling feverish.

DAY 9

David was tested for COVID-19 after showing symptoms. His result is positive. Everyone David saw will have to self-isolate and get tested.

Testing negative for COVID-19 does not guarantee that you are not infected with the virus. It can take up to 14 days from the time of exposure to the time you get a positive test result.

REMEMBER THAT THE INCUBATION PERIOD CAN BE UP TO 14 DAYS FOR COVID-19.
